It is home to a 170,000 square foot production facility, which is the home of the Compact Equipment and Construction department. West Caldwell, New Jersey is home to the Machine Tool division and Cleveland, Everett is home to the Forklift division. The U.S. headquarters in Georgia facilitates a first rate parts operation capable of supplying an excess of 25,000 line items to support Lift Truck, Compact Equipment, Machine Tool and Construction consumer requirements.

There are well over 220 Doosan service and product sales locations operating in Canada and the United States. What's more, there are more than 90 independent dealers moving forklift materials and materials handling equipment. This network allows Doosan Infracore America to aggressively compete in this competitive market. The lift truck product line remarkably features 63 different models consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion lift trucks. Capacities of these numerous truck versions vary from 3,000 to 33,000 lbs. All trucks are built in an ISO 9001 certified facility.

Doosan Infracore America is the fastest expanding lift truck company in the North American marketplace, due to their stability in maintaining a high degree of client service excellence and optimum product functioning to all Doosan Infracore Lift Truck users. The U.S. lift Truck division stationed in Cleveland has a skilled team knowledgeable in Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's initial home-based forklift market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. begun to import assembled lift trucks as part of a national machinery expansion project. Early sales of this industrialized equipment focused on large business communities, the armed services and on state-run firms. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical training grew to become the new focus for improving quality and product development.

Domestic lift truck business for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's sophisticated technological advancements combined with sales success placed them in a position of significant growth of their lift truck operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative enterprise project to respond to competitive pressures in the US materials handling industry. This project greatly expanded Daewoo's lift truck sales. Construction was finished in 1984 to facilitate a modern plant which helped establish the business for the manufacture of high added-value products suited for export. In 1993, the corporation had a global sales network and started exporting designs they had established through in-house technology, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into international markets.
